

Cloud Transformation Assessment

Accelerate your cloud journey with evidence-based insights

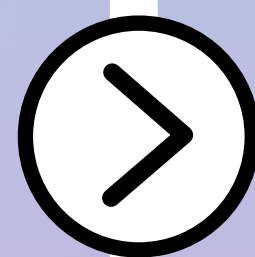

As organizations evolve, modernizing their IT landscape becomes essential. Key drivers for cloud transformation include moving away from outdated and costly legacy systems, increased scalability and innovation, aligning IT with business goals, and gaining comprehensive visibility into application portfolios.

Fujitsu Cloud Transformation Assessment guides your cloud journey while minimizing risk and ensuring a smooth transition. We facilitate informed decisions to support existing and future strategic directions with a structured, data-driven approach, combining Fujitsu's proprietary methodologies with leading industry tooling.

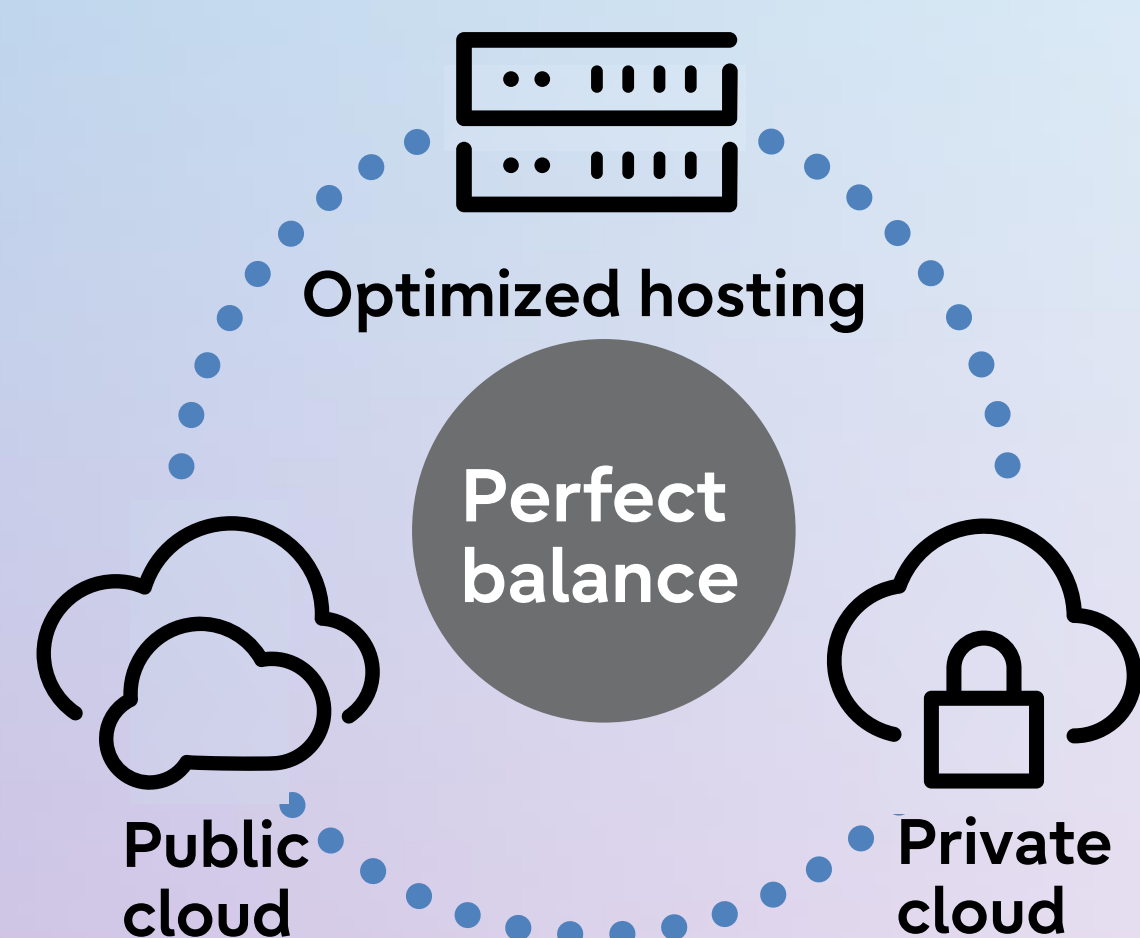

Phase 1. Discovery: Provides a comprehensive view of the customers' 'current state' of the infrastructure and its business value.

Includes more accurate rendering of the current landscape than traditional discovery methods, critically providing not only a true audit but also the dependencies between applications and infrastructure, key to making the right modernization choices.

Phase 2. Assessment: Identifies the 'future state' of the in-scope environment and gives you transformation recommendations in detailed reports.

Includes modernization strategy recommendations per application. We adopt a tool enabled interactive and iterative approach that provides a quantitative and qualitative assessment of an application's current state and its alignment with business and technical goals.

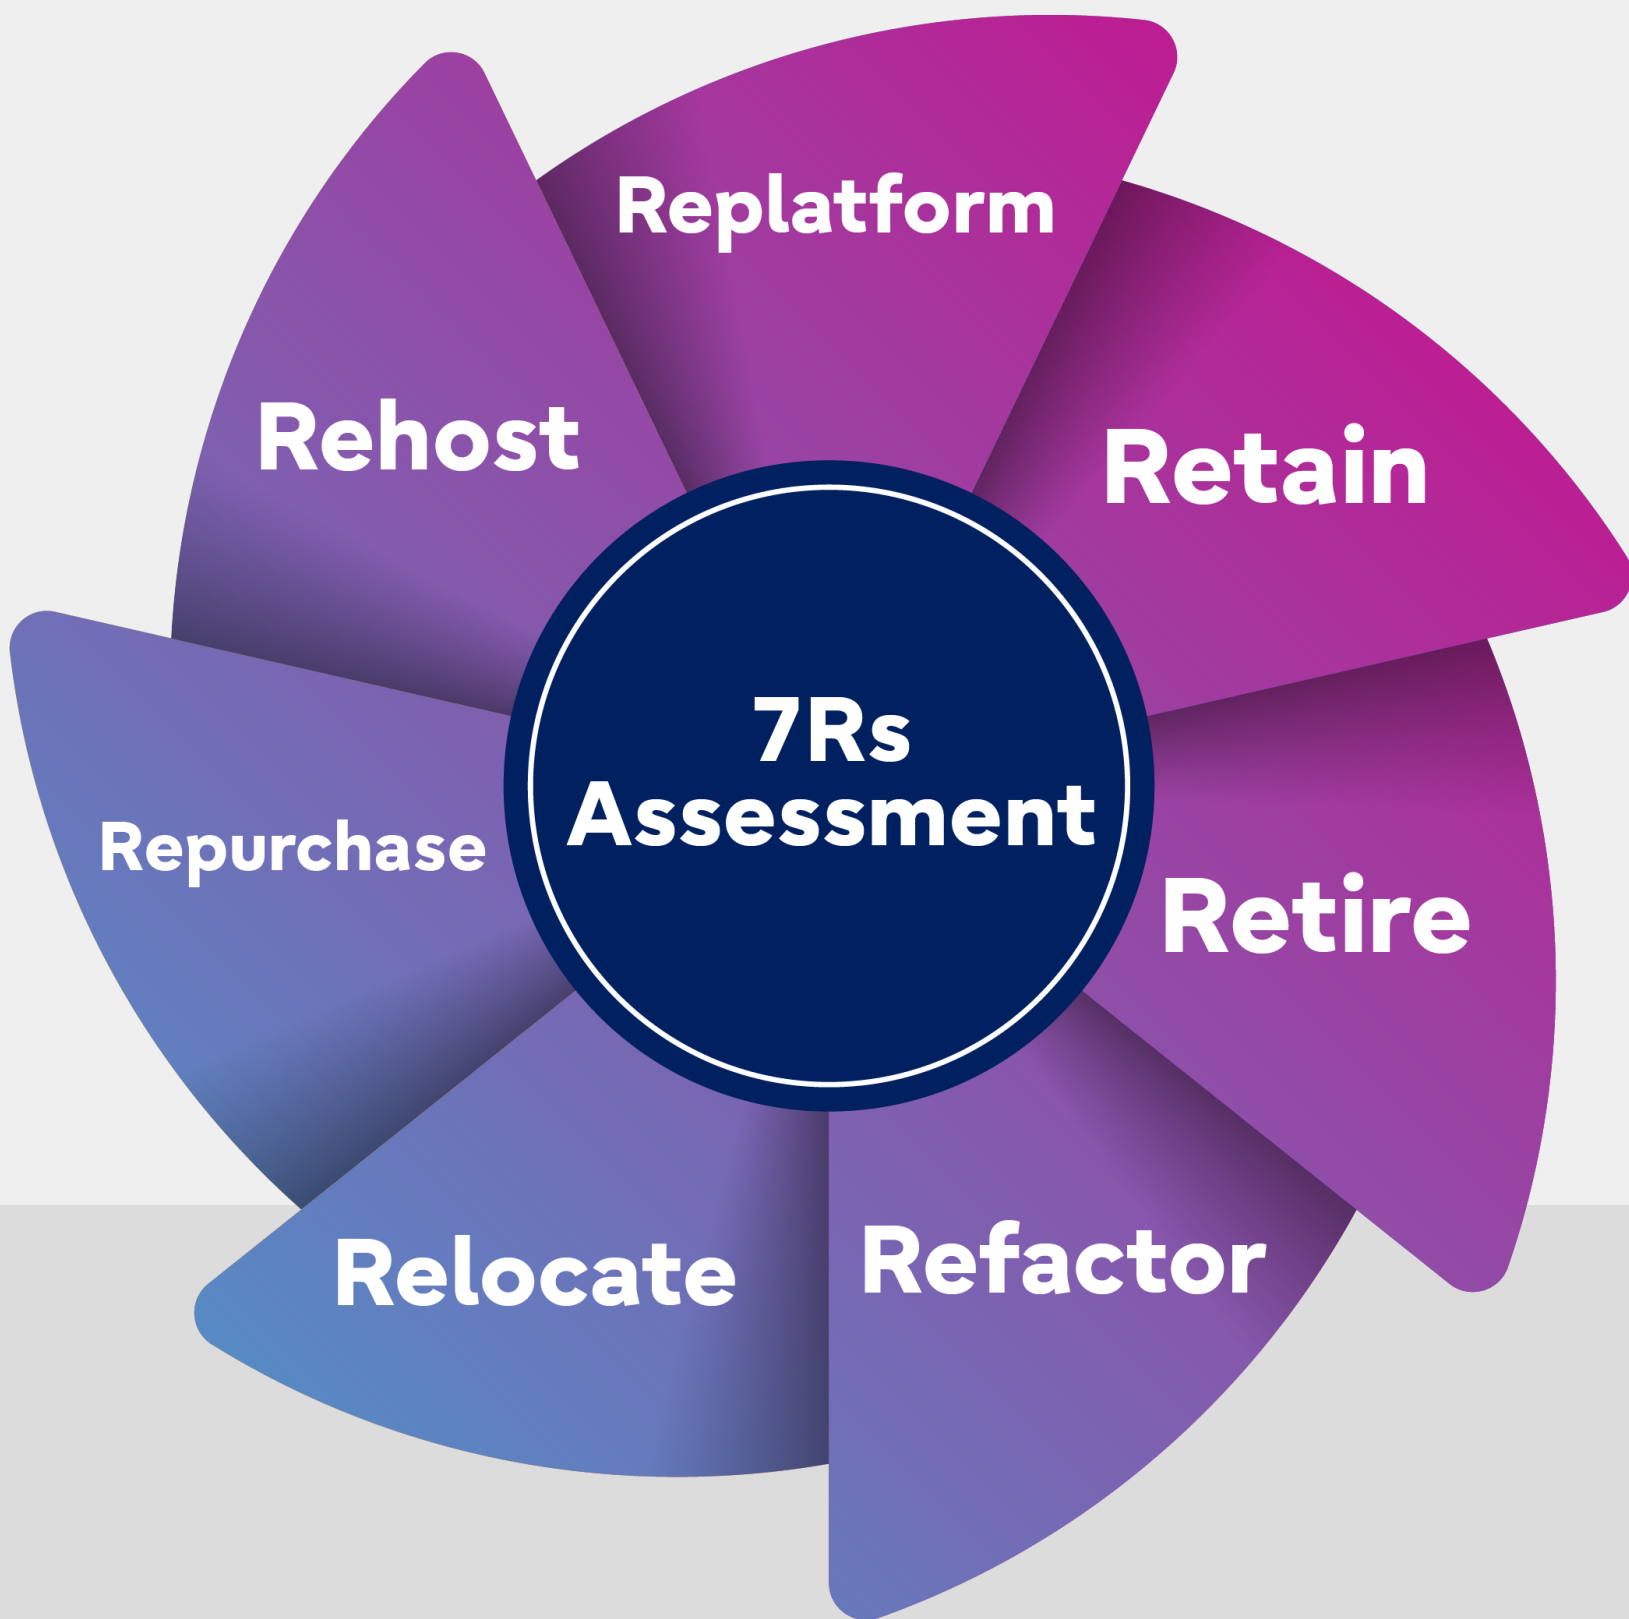

Our consultative approach assesses applications based on factors such as business criticality, technical debt, security posture, performance, and maintainability, helping stakeholders make informed decisions about which applications to modernize, retire, rehost, or refactor. This interactive assessment methodology highlights applications that are high-risk, due to outdated technologies or applications, and that are ready for cloud-native transformation.

The Cloud Transformation Assessment provides a detailed Discovery and Assessment of your organization's current digital estate and evidence-based recommendations to support your multi-cloud or Hybrid IT transformation journey.

Fujitsu 7Rs assessment process whereby we conduct an in-depth analysis to produce detailed transformation recommendations, indicative costs, and planning insights and risks.

“Platform agnostic: anywhere to anywhere.”

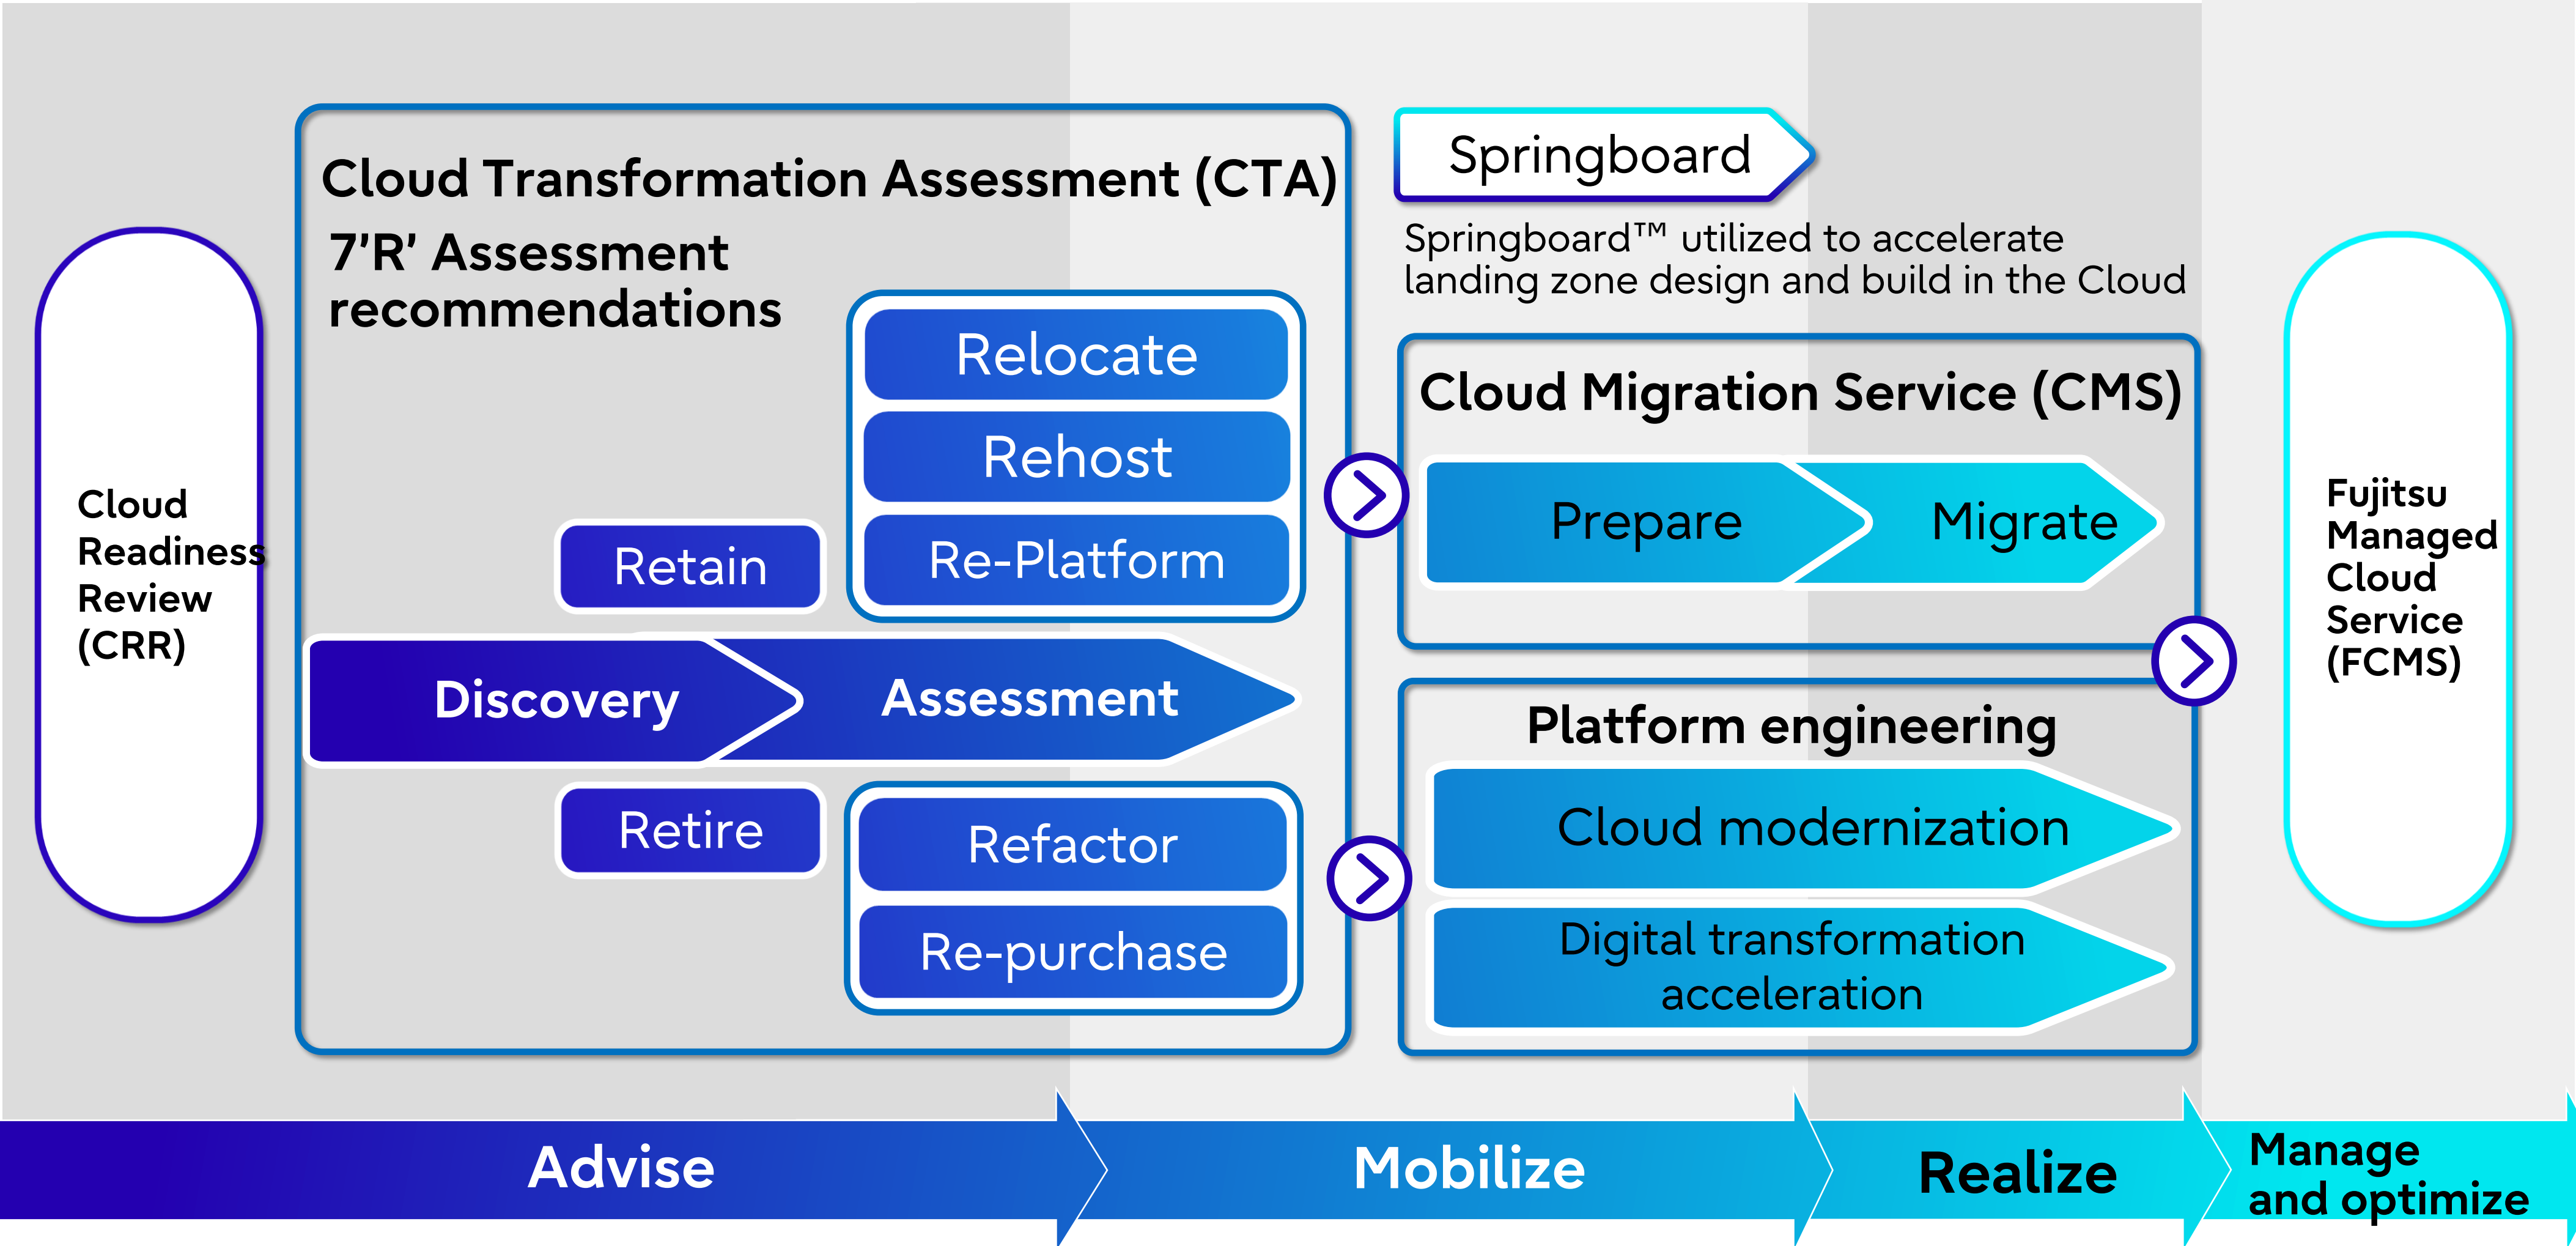

By increasing the efficient usage of resources, identifying the under-used and redundant processing and consolidating resources to reduce the energy use and carbon footprint.

“We make the world more sustainable by building trust in society through innovation.”

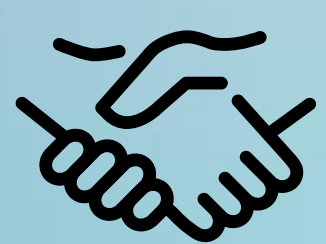

Our offering Cloud Transformation Assessment – and optional add-on services:

Why Fujitsu?

A transformation partner

Using our comprehensive range of capabilities and services, proven methods, and accredited experts, focusing on your business and technical imperatives.

Global capability for cost-effective delivery

We combine industry know-how with broad technology expertise in all cloud aspects. Working with dedicated teams to provide a consistent and highly efficient approach.

Breadth of cloud portfolio and experience

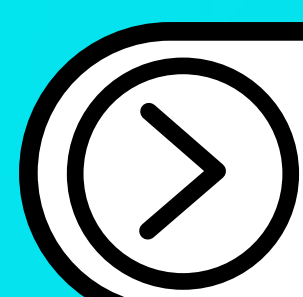

Extensive knowledge of legacy systems and years of experience with the end-to-end assessment migration and ongoing management and optimization.

Security and compliance at the heart

Firmly integrated into all transformation recommendations and play an integral role to our transformation planning.
