

Green Procurement

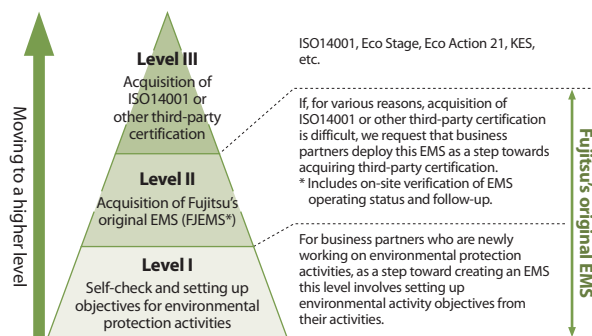

In cooperation with our business partners, we promote green procurement —from parts and materials for manufacturing through software and services —to provide our customers with products and services with superior environmental efficiency.

Our Approach to Green Procurement

In our procurement activity, we give priority to purchasing parts, materials, and products that are eco-friendly. We stipulate our basic requirements for green procurement in the Fujitsu Group Green Procurement Direction and promote green procurement activities together with our business partners.

Green Procurement Activities

The Fujitsu Group is engaged in the following two proactive efforts as green procurement activities in the Environmental Protection Program (Stage V).

Improving Our Business Partners' Environmental Management Systems (EMS)

In the Environmental Protection Program (Stage V), we are aiming at raising the level of our business partners' EMS.

In order to further promote our business partners' environmental burden reduction activities, we use EMS Upgrade Meetings and other events to urge them to raise their EMS standards by acquiring third-party certification and constructing an FJEMS. We have set 'Raising the EMSs operated by our materials suppliers to Level II or above' as a specific target, and this had been 92.9% achieved by fiscal 2008.

Construction of Business Partners' Chemical Substances Management System (CMS)

In the Environmental Protection Program (Stage V), we target the construction of chemical substances management systems (CMS*) by our business partners. To achieve appropriate management of chemical substances throughout the whole supply chain, we request and support the construction of CMS based on the Guideline for the Management of Chemical Substance in Products issued by JGPSSI*, and promote

strengthened management of chemical substances with a strong emphasis on source management.

Specifically, we audit the status of CMS construction at our materials suppliers, and help them when their management systems are found to be inadequate. By fiscal 2008, the proportion of suppliers with a properly-constructed CMS had risen to 97.6%.

In the future, we will continue to stress the importance of supplier source management through briefing sessions and periodic audits, and aim at raising the level of chemical substances management in the whole supply chain.

Promotion of Green Policy Innovation by Strengthening Green Procurement Activities

In order to implement the Green Policy Innovation initiative (reducing our customers' environmental burdens through the provision of Green IT) announced in December 2007, we started a program that solicits proposals from our business partners for excellent environmental technologies and materials, and, having considered and evaluated them, we propose their adoption in a timely, inter-departmental way to our Design and Development Division.

In fiscal 2008, we set up systems for soliciting proposals and evaluating them internally, and constructed a proposals database. Some of the proposals we have received from our business partners have already been evaluated in detail with a view to adopting them in the next round of products to be developed. We intend to go on developing products with outstanding environmental functionality by actively adopting excellent environmental technologies and materials.

Infrastructure for Achieving Green Policy Innovation
