### Fujitsu's Dedication to "Monozukuri" (manufacturing innovation)

Kahoku City in Ishikawa prefecture is one of many places where Fujitsu's enterprising spirit has taken root. Our main plant that manufactures and ships servers and storage systems, known as Fujitsu IT Products (FJIT), was established there in April 2002. The wide range of experience accumulated through the manufacturing of servers and storage systems is also deployed in the development of service products aimed at strengthening our customer products and ICT services. FJIT also provides practical know-how to innovation promotion divisions and plant managers, as a model factory.

Fujitsu's spirit in "monozukuri" can be found in the pulsating heart of Europe. Our Augsburg factory located in Germany is an environmentally-friendly factory fully equipped with the most advanced facilities, ready to provide mission-critical servers that support our social infrastructure to anywhere in the world. The Augsburg factory is a key player in supporting the future expansion of Fujitsu plants in various parts of the world.
