

Simplify Your Meeting Room

Lifesize!

Launch a call on the display from your own device

With Fujitsu Collaboration Board, the only thing you need to start a video call on the main screen is your phone.

Wirelessly connect your phone to the screen, launch the call and that's it. You don't have to touch the Collaboration Board, tap on a tabletop console or even get off your seat.

Totally locked down, safe and secure

You can switch between Android and Windows or remove the Android entirely. Keep your setup safe from curious by enabling Kiosk mode and limiting access to Windows desktop.

Collaboration Board keeps what you do on a meeting room screen private and secure. One tap clears your footprint, closing apps and clearing any browsing history.

Get meetings started rapidly

Collaboration Board's smart room calendar picks up video calls and meetings to save precious time. It supports most popular UC apps like Zoom, MS Teams, Google Meet, WebEx, GoToMeeting and Lifesize.

Improve productivity

Collaboration Board aids productivity and improves how people meet by delivering a consistent and intuitive user experience. With support for any Windows program, Microsoft Store or web URL, you can find and launch the apps with one touch.

Share your screen from anywhere

Wirelessly cast what's on your device to the Collaboration Board from anywhere in the room, no cables, no restriction. Supporting every major device type: Windows, Mac, Web, iOS and Android with support for AirPlay, Google Cast, Miracast and apps for network-wide deployment.
