Space saving of
34%

Increased space utilization from

42% to 71%

Four zones for agile working

Enhancing collaboration, creativity and innovation

With management, developer, sales and service staff, the Munich offices have to provide for both concentrated individual working and collaboration with colleagues as well as virtual teams and phone conferences every day.

The new, agile concept created different workspaces for the different types of activity:

Home zones

Fully equipped, classical workspace for day-to-day work

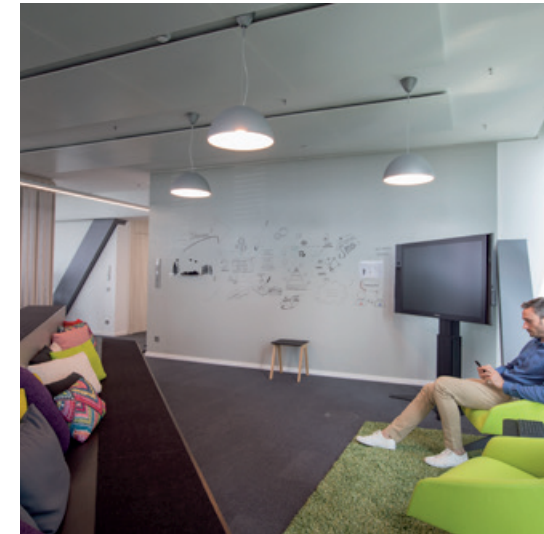

Think tanks

Space for collaboration in small groups

Meeting rooms

Conferencing and collaborating with large groups

Creative zones

Space for creative interchange and spontaneous get together

In detail

A pleasant work environment can enhance employee well-being, motivation and productivity. The introduction of an agile, activity-based office concept in 2017 was to create space for co-creation and creativity.

Agile Office Concept

The 16 floors of office space are providing workspaces for different kinds of tasks: creative zones with writable walls. Home zones for teams to meet up, with fully equipped flex desks for day-to-day business. Think tanks with window facing tables offering the best panorama of the city of Munich, for meetings with small groups or phone calls. Classical meeting rooms for conferencing and collaborating with large groups. And recreation areas such as coffee lounges, open spaces and quiet rooms.

Clean Desk Principle

Desks are chosen freely. Each employee has two lockers to store personal items, keyboard, mouse and notebook. In addition, each team has a team storage in its home zone.

Ergonomics

All desks and displays are height-adjustable. Noise reducing elements between workspaces ease concentration.

Workspace Equipment

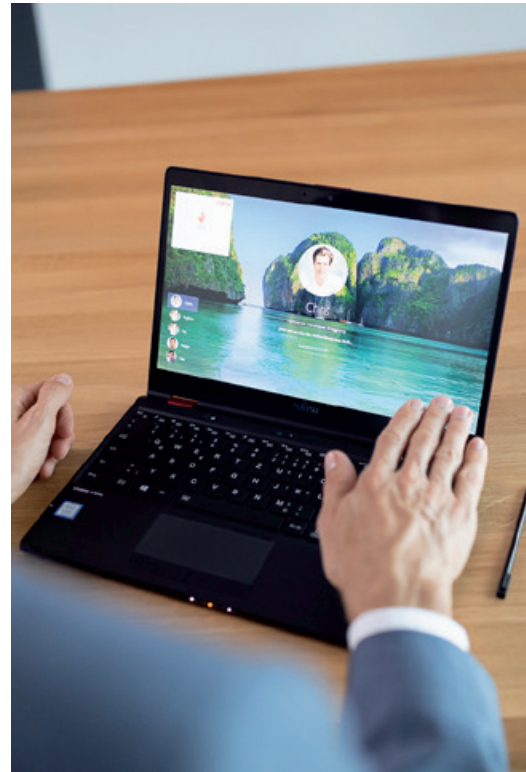

Fujitsu PalmSecure™ Authentication Technology

Security in the palm of your hand. Biometric authentication eliminates passwords and is extremely hygienic as no contact to the skin is required. Employees stay secure wherever they work.

Enhancing collaboration with ESPRIMO Meeting Room Edition (MRE)

Compact mini PC with desktop PC functionality. Mounted to the 55" Display XL55-1 TOUCH the ESPRIMO Q958 transforms conference rooms and think tanks into smart, connected places to meet. It allows a presenter to control the meeting content from virtually any touch-enabled display.

Dual Display Bundle & Workplace Connect Kit

Classic workplaces are equipped with 2 x 24" displays (P24-8 TE Pro) and a Workplace Connect Kit which includes a USB port replicator, dual USB 3.0 quick charge adapter and notebook AC adapter. This eliminates clutter and creates a clean and efficient workplace.

Results

The resulting generous layout facilitates an open, communicative atmosphere with various possibilities for collaboration of all kinds. At the same time, concentrated individual work is equally possible with a wide choice of enclosed workspaces for confidential meetings and calls.

Employee wellbeing is supported by height-adjustable desks and various recreation options. The activity-based workspaces provide for co-creation within teams.

Benefits

- Increased space utilization from 42% to 71%
- Reduced TCO by 26%
- Improved employee wellbeing and satisfaction
