- Transition of Sales (Consolidated)

- Number of Employees (Consolidated)

- Corporate Governance

Basic Concept

We, recognizing “Fujitsu Frontech Way” as our basic policy, run business in view of our stakeholders including shareholders, employees and business partners, at all times. In addition, we not only pursue the efficiency of business to enhance a corporate brand, but ensure the transparency with sufficient functions to inspect business operation and the internal control system, in the purpose of substantial corporate governance.

Governance Structure

We adopt a “company with audit and supervisory committee”. We aim to make our corporate governance structure more substantial, with further reinforcement of functions of audit and supervision, by establishing Audit and Supervisory Committee and vesting directors with the right of vote at Board of Directors. In addition, we have appointed at least one non-executive director who is familiar with contents and actual conditions of our business to enhance the efficacy of functions of audit and supervision.

Moreover, to adapt to variable business environment without fail, we, through separation of decision-making & supervision and execution under the executive officer system, are strengthening our management strategy planning function led by President and speeding up business execution.

-Fujitsu Frontech Way

All employees of Fujitsu Frontech Group will mitigate a variety of risks caused by our business on the basis of Corporate Vision, Corporate Guidelines as well as Code of Conduct and Principles defined in “Fujitsu Frontech Way” to fulfil social responsibility.

Business Structure

We support the innovation and development at “the Forefront of Customer Business”, through providing comprehensive businesses from products to solution services.

One-stop Business of Products, Solutions and Services

We, Fujitsu Frontech Group, establish one-stop business structure to deliver our products, solutions and services, which consists of 2 segments of “Global Product Business” and “Solution & Service Business”, to propose new shape of business to customer.

In “Global Product Business” whose core businesses are “Mechatronics” and “System Products”, we deliver to global markets with our own know-hows accumulated in financial, retail and public business fields. In “Solution & Service Business” whose core ones are “Service Integration” and “Frontline Solutions”, we deliver new value for customers with total solutions based on both our own cutting-edge technology and ideas from “Koto (Service-oriented way of thinking)”.
