

With our customers, we contribute to the protection of a rich global environment, using state-of-the-art technology to provide semiconductor devices with superior environmental characteristics.

Operational Principles

By applying the following principles, we work to prevent pollution of the global environment and reduce the environmental burden of our products throughout their lifecycles, including development, procurement, manufacture, sales, usage, and disposal:

1. By aggressively promoting the development of Super Green Products and the proper management of product chemical content, we improve the environmental characteristics of our products and actively reduce the burden on the global environment and our customers.
2. We aggressively promote measures to counteract global warming and reduce emissions of greenhouse gases (CO₂, PFCs).
3. We aggressively promote chemical management and reduced emissions of volatile organic compounds (VOCs).
4. We aggressively promote waste reduction and appropriate recycling.
5. We conform to environmental regulations around the world, and keep our promises to customers.
6. We work to improve the individual environmental consciousness of our employees, to help them become good environmental citizens, promote the preservation of biological diversity, and make environmental and social contributions in their local communities.
7. We expand the effectiveness and transparency of our environmental management system, driving continuous improvement and development.

Environmental Load Data

Environmental load and business activities

(Footnote) Method for calculating chemical substances

Input: The amount of chemical substances, which are subject to the PRTR law, used in the plant.

Output: Measure the concentrations of chemical substances, which are subject to the PRTR law, emitted in the effluent drain and exhaust gas vent from the plant. Then, multiply the total amount of waste or total gas emissions, or calculate based on the balance of the amounts of incoming and outgoing chemical substances.

Annual Trends in Environmental Load Data

Amount of energy consumed

Amount of CO₂ emitted

Amount of water used

Industrial waste

Amount of chemical substances used

[Main reasons for increase and decrease]

- The amount of chemical substances used has been reduced by 44% due to line elimination and consolidation.

[About these graphs]

- Some past data have been revised in line with improvements to more detailed counting.
