Fujitsu
Playgrounds
for SAP HANA®

Ensure the Success of Your Individual SAP HANA® Project – Right from the Start!

SAP HANA® has the potential to accelerate business decisions and processes. But can SAP HANA® improve your business? The Fujitsu playgrounds allow you to map the capabilities of SAP HANA® to your individual requirements and thus provide a distinct decision and planning base for effective projects.

Fujitsu – Technology
Innovator of the Year

Why use a SAP HANA Playground?

SAP HANA is a completely new real-time database platform. It has the potential to accelerate and streamline analytics, planning and predictive analysis. And, it is a perfect base for speeding up proven application scenarios and for developing innovative applications. In short: SAP HANA opens up a wide array of opportunities to improve current processes and even completely innovate the way enterprises run their business.

However, the introduction of a promising new technology is naturally accompanied by skepticism and numerous questions: Will it deliver measurable results? Will it help to solve the problems in my business environment? Will the outcome meet my expectations and those of my manager?

The Fujitsu playgrounds for SAP HANA have been designed to find the answers to such questions. They provide you with a professional test bed which lets you experience SAP HANA with your individual data, selected solution scenarios and individual usage cases. The outcome is measurable results and a clear preview of the business value of SAP HANA for your specific set-up.

In a nutshell: SAP HANA playgrounds help to ensure the success of your individual project not just right from the start, but even before you start!

SAP HANA Playground Details

SAP HANA playgrounds combine Fujitsu's certified infrastructure offerings for SAP HANA with the implementation of sandbox scenarios. These complete environments allow you to experience and evaluate SAP HANA. The infrastructure comes ready-to-run, preinstalled with test licenses and SAP software components (e.g. SAP HANA, SAP Business Objects 4.0, SAP System Landscape Transformation Tool).

Sandbox Options

Our sandbox options comprise the popular SAP Rapid Deployment Solutions combining them with migration and implementation services. The selected sandbox plus replicated customer data are implemented on a certified Fujitsu Power Appliance for SAP HANA infrastructure.

Sandbox options:

SAP Business Warehouse on HANA Sandbox

- Prepare migration of the existing SAP test BW (e.g. upgrade to required release level, split of ABAP and JAVA stack, Unicode conversion)
- Migrate prepared customer test BW system (up to 2 TB)
- Test and set-up for one BW data model (free of choice)
- Measure the dramatic performance improvements with SAP HANA compared to the current BW system.

or

Operational Reporting Sandbox

- Connect the Fujitsu SAP HANA test infrastructure to your ERP test system
- Replicate operational data
- Provision SAP Operational Reporting as described in the SAP RDS package with 5 reports or dashboards (free choice from a list of 23 options)
- Experience the speed of SAP HANA when reporting directly on the latest, most detailed data from your SAP ERP system

and/or

CO-PA Accelerator Sandbox

- Extend to the Operational Reporting sandbox
- Provision SAP CO-PA as described in the SAP RDS package
- Compare the performance of your existing ERP test system with an ERP system which directly reads data from SAP HANA

Fujitsu playgrounds are cost-optimized and thus concentrate on the essential needs of a non-productive environment. However, they provide you with a professional and complete test bed which realistically displays the effects SAP HANA has on your individual business, thus ensuring a profound base for decisions and an optimal preparation for your individual SAP HANA project.

The Fujitsu Playground Offerings are supported by GLOOBBAL

GLOOBBAL was founded in 2011 by former SAP employees as the first company entirely dedicated to and focused on SAP HANA. SAP HANA provides tremendous opportunities that will change the world of business IT. Leveraging these opportunities and turning them into tangible business benefits is not trivial, as it requires business process and application know-how combined with a deep understanding of this new technology. We have architected GLOOBBAL to help companies with exactly this: **Turning SAP HANA into Business Value.**

GLOOBBAL is a new type of company. It has been founded by applications people and carefully composed to cover all aspects required to bridge the gap between technology and business innovation. With its headquarters in Heidelberg, Germany, and offices in Buenos Aires, Argentina, it has been designed from the beginning to be a global organization, enabling the best talent to work on the most exciting projects, across geographical boundaries. www.gloobal.com
