In fiscal year 2023, Fujitsu's Poland GDC implemented a series of sustainability and operational improvements, driving positive environmental, social, and financial outcomes.

Challenge

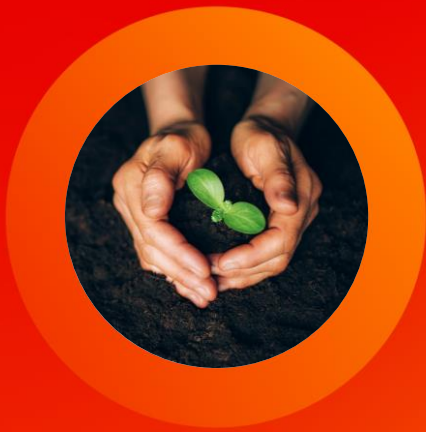

The challenge was to reduce the environmental footprint across multiple areas of operations, including energy consumption, transportation, logistics, and procurement. Fujitsu Poland GDC needed to address rising expectations for sustainable business practices and align with global ESG standards, all while maintaining operational efficiency and minimizing costs.

Solution

Fujitsu Poland GDC implemented a range of sustainable solutions, including energy-saving technologies, hybrid fleet transitions, responsible procurement, and optimized asset management. Initiatives such as renewable energy adoption, automated lighting, eco-catering, and carbon-neutral shipping align with global ESG standards while promoting efficiency, cost savings, and environmental awareness.

Outcomes

The implemented initiatives resulted in significant energy savings, with renewable energy usage reducing CO₂ emissions and a decrease in paper consumption thanks to electronic signatures. Monitor giveaways and furniture sales minimized waste, while various sustainability measures inspired employees to adopt eco-friendly habits, fostering a culture of environmental responsibility both at work and home.

“By embedding sustainability into every aspect of our operations, we not only reduce our environmental footprint but also inspire positive change within our organization and beyond.”

Katarzyna Burchard, Environmental Pillar Lead for Poland GDC

Environmental: Transitioned 49% of the fleet to hybrid vehicles, reducing emissions and fuel consumption.

Social: Conducted Responsible Purchasing Training to promote eco-friendly procurement across departments.

Emissions Transparency: Poland GDC mapped office equipment for GHG emissions reporting, enhancing accountability. The company also secured a Renewable Energy Guarantee Certificate, affirming its commitment to sustainability.

Driving Sustainability Through Governance: A Case Study of Fujitsu Poland GDC's Commitment to Environmental Accountability

Fujitsu's Poland GDC has demonstrated that sustainability and business efficiency can go hand in hand. From energy-saving technologies to sustainable transportation and asset management, these initiatives have generated measurable benefits, including cost savings, resource conservation, and improved environmental performance. The transition to hybrid vehicles, energy-efficient office operations, and optimized procurement processes reflect the organization's commitment to global ESG standards.

Through these actions, Fujitsu Poland GDC not only addresses current environmental challenges but also lays the groundwork for future eco-conscious initiatives. These efforts enhance the company's reputation as a responsible business partner while fostering employee engagement and collaboration around sustainability. Fujitsu Poland GDC will continue to explore innovative solutions to minimize environmental impact, supporting a more sustainable and resilient future.
