

# SAP S/4HANA

## Simplify your approach to digital transformation

Decision making support, analysis, best practices, guided configuration, instant pricing – support your business processes with high-speed cutting-edge functionality. Learn how our optimized and agile methodology XpressWay can simplify and streamline your enterprise operations with SAP S/4HANA, through a highly efficient evaluation workshop, making sure you get the most out of this innovative solution.

Society, the economy and industry are undergoing digital transformation. This digital transformation not only changes processes within companies at a rapid speed – sometimes with an uncertain outcome – but also entire business models. This has the effect of changing the requirements for the organization of the IT architecture, creating a need for solutions that can be flexible and quickly adapted to changing conditions.

SAP HANA and SAP S/4HANA address exactly these challenges and paves the way towards a successful digital economy. But how do I start a successful journey towards S/4HANA? Experience from ramp-up projects has revealed the need for an end-to-end migration strategy, particularly when it comes to data modelling and process blueprinting.

With **XpressWay for SAP Application Transformation**, Fujitsu offers valuable support for the introduction of SAP HANA or SAP S/4HANA. In line with a consistent all-in-one package, Fujitsu supplies all services required for a successful project from one source. This process

begins with a fact-based process analysis, process mining, and ends with the handover into operation.

With XpressWay, we are also using SAP Activate, SAP's project accelerator tool for SAP S/4HANA implementation, which adds valuable process analysis capabilities. The focus is on the complete system landscape. By doing so, we tailor our approach to your requirements, regardless of whether you are using an SAP solution, using a traditional SAP ERP system or if you have already started with SAP HANA.

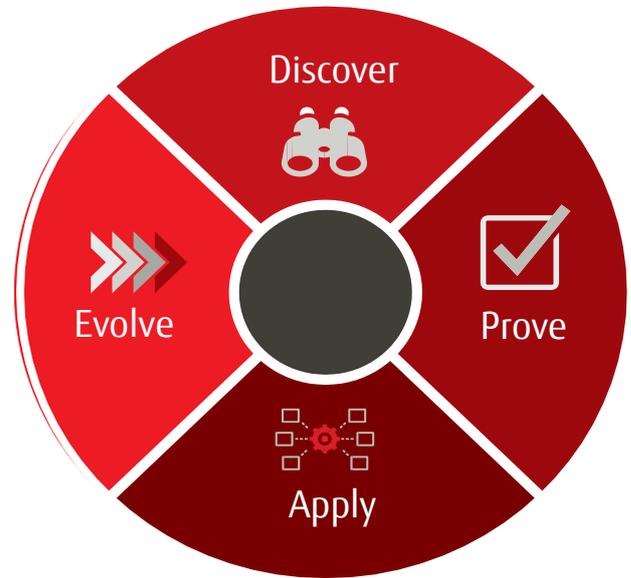

The most important criteria for a successful implementation process is developed together with the customer in several analysis workshops on issues such as the added value of SAP S/4HANA, starting processes and code assessment. Fujitsu experts also provide conceptualization advice on a high-end IT architecture as the basis for stable SAP HANA or SAP S/4HANA operations and neighboring systems.

# Your XpressWay to a digital journey with SAP

Fujitsu's robust, proven approach ensures that we deliver early business benefits.

We take our 40 years of experience in SAP best practice and the implementation and support of SAP S/4HANA solutions to deliver the best business outcomes. Then we combine these elements with our practical, successful real-world experience of deploying in both hybrid and full cloud contexts.

Based on Fujitsu XpressWay™, our modular four-stage approach comprises a series of XpressBlocks. These tightly defined packages of work are market priced, and have clearly defined inputs, deliverables and outcomes. Because Fujitsu Xpressway™ is designed to be iterative, business benefits can be realized quickly and built upon. Each stage includes a number of blocks: these are there to help you achieve a smooth transition to S/4HANA.

## Discover

We start by understanding your current business processes, applications landscape and future business needs. This in addition provides you with a roadmap, the steps required and the benefits you can achieve at each stage. Includes:

- Discovery workshop
- Process Mining
- Benefit analysis
- Cost analysis
- Custom code review
- Roadmap

## Prove

In addition to a transformation roadmap, we deliver a demonstrable system for your staff to use. We create architectural and concrete project planning. Also included are:

- Application Consulting
- Dashboard based on KPI framework
- Sandbox system with an application prototype

## Apply

We implement the solution using an agile, fast to fail approach, and ensure affected business units are fully prepared and enabled to support change using SAP Activate. This phase also covers:

- System conversion, determining whether Brown or Greenfield approach
- Customer code alignment (Hana-ready, S/4-ready)
- UI5 use with SAP Fiori

## Evolve

In any business, change is a given. Our iterative approach covers both ongoing management, helping with user adoption, and process improvement. It also includes innovation to drive more business.

- Business Process Monitoring
- BPM based on SAP Solution Manager 7.2
- SAP Basis operation
- SAP Application Management
- License maintenance
