

Cloud-based backup
and recovery

FUJITSU Cloud Backup as a Service

A more flexible, efficient and cost effective way to safeguard your data with a cloud-based backup and recovery service.

FUJITSU Cloud Backup as a Service

FUJITSU Cloud Backup as a Service (BaaS) provides a resilient, cloud based backup and recovery service. FUJITSU Cloud BaaS supports full system recovery, providing much more than folder and file backup and recovery.

The service provides a pure “pay-as-you-go” pricing model based on per gigabyte per month. The data can be easily assessed in a safe and efficient manner, directly through the Internet or Point-to-Point (P2P) connectivity.

FUJITSU Cloud BaaS empowers business to:

- Store and optimize backup data
- Enable rapid and effective recovery
- Monitor and manage backups

Secure and Cost-Effective Data Backup

With BaaS, you can be assured that your data is securely stored on Fujitsu Cloud IaaS Private Hosted Cloud. Data is encrypted during transit by default. For enhanced security, you can encrypt your data at source before it is sent to the BaaS appliance. Data remains encrypted during storage and can only be accessed with an encryption key.

Data will be deduplicated and compressed at source to reduce storage requirements. With flexible retention policies and charges based on per gigabyte of compressed and deduplicated data stored, you can enjoy a cost-effective data backup solution.

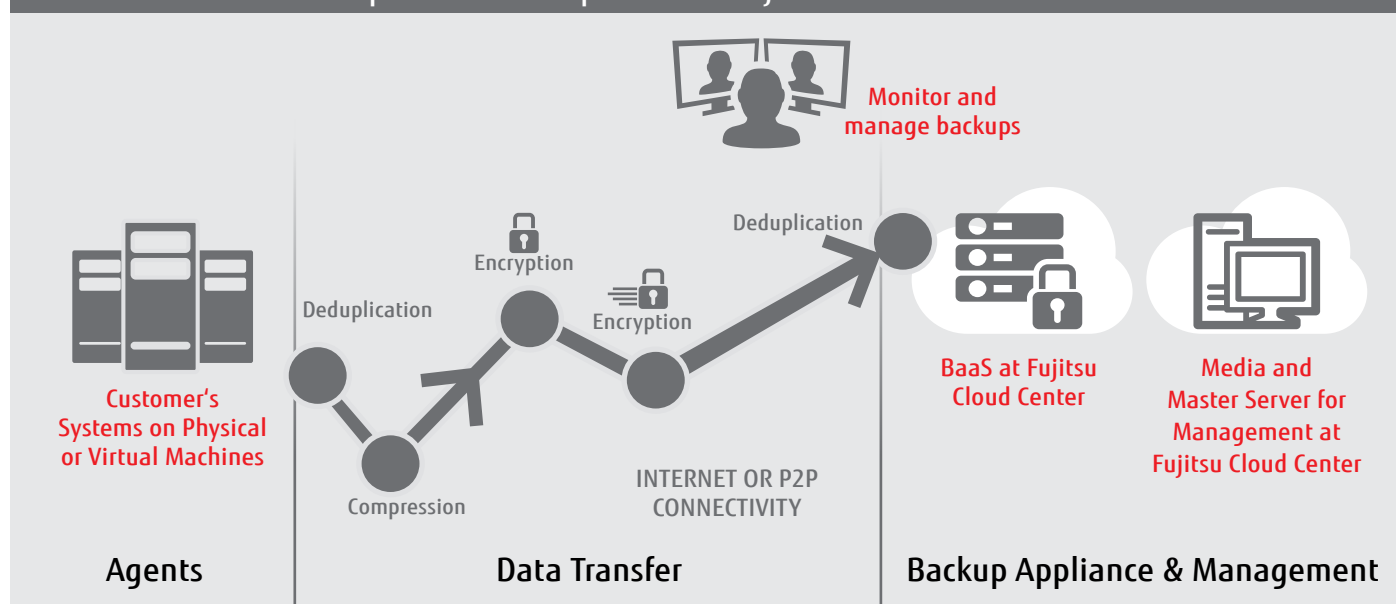

Data Backup Made Easy

FUJITSU Cloud Backup as a Service Managed Monitoring is an optional add-on service, providing ongoing monitoring of scheduled backup tasks where any failure will be identified and resolved in a timely manner to minimize disruptions.

FUJITSU Cloud Backup as a Service provides

- Fast backup and restore – direct to the cloud or via the BaaS Appliance On Premise. The local BaaS Appliance ensures shortest possible backup time and improves the Recovery Time Objectives (RTO)
- Reduced management complexity – user-friendly system administration portal that makes it easy to configure backup schedules, select retention periods, view job progress and alerts – and perform restores
- Greater flexibility – monthly subscription service that can be scaled as your data grows, reducing your capital expenditure and total cost of ownership
- Optimized network bandwidth and storage footprints – advanced client side deduplication, data compression and delta-pro block level processing technology to minimize storage footprint. After the first full backup, only new and changes data blocks are backed up
- Flexibility – Flexible retention scheduling helps satisfy internal and external requirements automatically replicated to a Fujitsu data center for offsite protection

Optimized data replication to Fujitsu BaaS Cloud Center

How it works

- BaaS agent automatically backup data from the host server over internet/network into a BaaS Appliance located in Fujitsu Private Hosted Cloud or a on-premise Backup Appliance
- The agents cover multiple operating systems and applications and allow a very granular backup and restore of specified environments like certain files or mail attachments
- Front-end deduplication ensures that only new and changed blocks of data are sent to the BaaS Appliance, decreasing backup time and reducing storage footprints
- Compression and bandwidth throttling maximize backup transfer speed
- Back-end deduplication streamlines storage and further decreases storage footprint
- Immediate access to recover files and folders
- Ongoing monitoring and management of backup environment

Why FUJITSU Cloud Backup as a Service?

FUJITSU Cloud BaaS builds on Fujitsu's breadth and depth of expertise – and more than 30 years of experience in the delivery of backup and recovery services to private and public sector organizations across the globe. We manage over 250,000 servers and 200 Petabytes of data for our clients worldwide.

With our offering, we address customers who want to control costs, reduce complexity, reduce backup times and improve IT management productivity. FUJITSU Cloud BaaS is an all-inclusive, enterprise-grade service based on Veritas software and Fujitsu cloud and data center facilities.

- "Pay-as-you-grow" model provides the scalability and agility you need with no high upfront costs
- Certainty of where your data reside ensures compliance to policies and regulations
- End-to-end data encryption for maximum protection of your data
- Comprehensive suite of cloud services – such as Infrastructure as a Service, Platform as a Service and Software as a Service, to complement your broader, more complex IT strategy
