Fujitsu Security
Security Information and Event Management

Why is Security Information and Event Management Important?

Organizations will continue to be attacked and point security defences can no longer keep pace with the ever-changing cyber threat landscape, leaving organizations susceptible to existing and emerging threats. To provide effective protection of information and services against these cyber threats, visibility of what is happening across the enterprise, is essential.

Fujitsu's Security Information and Event Management (SIEM) managed service is underpinned by a Security Intelligence Platform that provides the deeper visibility required by correlating events and information from multiple sources and uses automated analytical techniques, which enable threats and risks to be exposed. Additionally, the evidence gathered through the SIEM service lessens the likelihood of breaches before they happen by detecting early indicators of compromise, enabling rapid response and mitigation. The SIEM service also supports compliance with regulatory requirements.

What do we Offer?

Fujitsu's SIEM service provides a comprehensive answer, covering:
- 24x7 real time event/log monitoring of your network from our state-of-the-art Security Operations Center (SOC).
- Correlation of information from multiple sources such as end-points, firewalls, IPS/IDS, network devices, applications, operating systems and a range of other devices.
- File Integrity Monitoring to check specific file types are kept unmodified once stored and alert.

- Extensive support for the most common platform and application types.
- Diverse log source integration and capability to integrate any source required.
- Scalable solutions to meet the growing requirements of our customers.
- Compliance reporting (e.g. PCI-DSS, SOX, HIPAA, GPG13)
- Multiple deployment options to suit varied environments, including: Single Appliance, HA Pair and multi-tiered.
- Data mining analysis and trending.
- Real time correlation for forensic investigation.
- Integration with service desk.

Fujitsu's Security Operations Center

Fujitsu continues to invest heavily in its SOC which provides a focal point for:
- The co-ordination of security monitoring and security incident management.
- Acute situational awareness through a broad view of the security threat landscape due to the breadth of the Fujitsu client base and the links with Cyber Security Agencies and strategic technology partners.
- The ongoing support and tuning of technology platforms to enable the service to stay current against emerging security threat.
- Security event and incident-related information to better enable risk mitigation.
- Expert advice and reporting.
- Compliance assessment and support of associated reports and remedial actions.
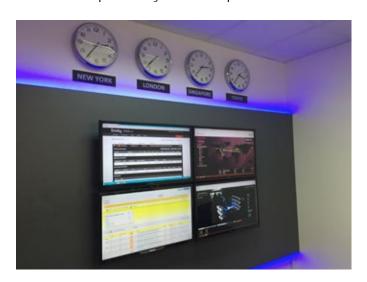

Benefiting from Experience

Effective security that strikes the right balance between protection and productivity is driven by the implementation of an intelligent security policy. Fujitsu has a large number of skilled, qualified and experienced security practitioners and consultants, enabling us to offer a comprehensive portfolio of professional services, including:

- Security assessment, gap analysis and ISO 27001 health checks.
- Security architecture review.
- Business and service continuity review, design, implementation and testing.
- Identity and Access Management.

Service Levels

In today's business world, security is a 24-hour a day requirement; Fujitsu provides round the clock service availability with a number of service level options designed to meet specific business needs.

Why Fujitsu?

- Over a number of years Fujitsu has built an enviable reputation for delivering global security solutions to public and private sector customers.

- We have a portfolio of integrated managed security services covering the complete spectrum of Information Security and Data Privacy.

- We offer software and appliance based SIEM solutions developed in collaboration with our strategic partners, who represent the most trusted names in Information Security.

- Our security expertise covers the complete solution life-cycle, enabling us to help our customers assess their security requirements, and then design, build and operate those security solutions and services.

- Our services are backed up by our renowned global ITIL aligned service delivery capability, enabling us to provide an end-to-end service that can be integrated into an organization's IT services.
