Vulnerability Management

Why is Vulnerability Management Important?

Almost daily, we hear of vulnerabilities that are being announced enabling attackers, malware and rogue operators to compromise systems and services within the enterprise.

Many of these vulnerabilities allow access which can go undetected by traditional security controls and enterprise management tools.

Effective Vulnerability Management allows an organization to proactively gain and then maintain intelligence of the state of the assets within the enterprise. Discovery of vulnerabilities, and the subsequent prioritization of remediation actions, enable a holistic security/risk view of the enterprise that cannot be readily achieved by the use of other systems and toolsets.

Having intelligence of what has been deployed before, what exists now, and early intelligence of future problems provide a foundation to build confidence in the security of the enterprise.

Vulnerability Management provides a key enabler for managing the security risk and protecting the organization's reputation and revenues.

What do we Offer?

Fujitsu's Vulnerability Management service provides a comprehensive solution, covering:

- **Vulnerability Management**
  - Discovery – identify what is really on the network – systems, applications, services, ports, certificates.
  - Assessment – scanning the discovered devices, systems and applications for vulnerabilities.
  - Prioritize – rate vulnerabilities using a comprehensive, fully searchable knowledge base.
  - Remediate – track vulnerability management actions, create patching lists and manage exceptions.
  - Reporting – ability to create on demand customizable reports.

- **Continuous Monitoring**
  - Continuously monitor internet services whether in your own DeMilitarized Zone (DMZ) or cloud service provider.
  - Check for unexpected hosts/operating systems, expiring SSL certificates, open ports, vulnerabilities and undesired software.
- Deployment of Cloud SaaS, appliance or VM deployment options to suit every infrastructure requirement.
- 24x7 monitoring on infrastructure and services.
- Scalable and tailored solutions to meet the organization's specific requirements.
- Ability to facilitate regulatory (including PCI) and security compliance reporting for the enterprise.
- Data mining analysis and trending.
- Integration with service desk.

Fujitsu's Security Operations Center

Fujitsu's state-of-the-art Security Operations Center (SOC) provides:

- Co-ordination of security monitoring and security incident management.
- Acute situational awareness through a broad view of the security threat landscape due to the breadth of the Fujitsu client base and the links with Cyber Security agencies and strategic technology partners.
- Ongoing support and tuning of technology platforms to enable the service to stay current against emerging security threat.
- Security event and incident-related information to better enable risk mitigation.
- Expert security advice and reporting.
- Compliance assessment and support of associated reports and remedial actions.

Benefiting from Experience

Effective security that strikes the right balance between protection and productivity is driven by the implementation of an intelligent security policy. Fujitsu has a large number of skilled, qualified and experienced security practitioners and consultants, enabling us to offer a comprehensive portfolio of professional services, including:

- Security assessment, review and health checks.
- IT Security architecture review and solution design.
- Business and service continuity review, design, implementation and testing.
- Identity and Access Management.

Service Levels

In today's business world, security is a 24-hour a day requirement; Fujitsu provides round the clock service availability with a number of service level options designed to meet specific business needs.

Why Fujitsu?

- Over a number of years Fujitsu has built an enviable reputation for delivering global security solutions to public and private sector customers.

- We have a portfolio of integrated managed security services covering the complete spectrum of Information Security and Data Privacy.

- Our security expertise covers the complete solution life-cycle, enabling us to help our customers assess their security requirements, design, build and operate security solutions and services.

- Our services are backed up by our renowned global ITIL aligned service delivery capability, enabling us to provide an end-to-end service that can be integrated into an organization's IT services.
