

Vulnerability Assessment As A Service

Fujitsu Thailand
Managed Security Service

Why is Vulnerability Assessment Important?

Almost daily, we hear of vulnerabilities that are being announced enabling attackers, malware and rogue operators to compromise systems and services within the enterprise. Many of these vulnerabilities allow access which can go undetected by traditional security controls and enterprise management tools.

Effective Vulnerability Assessment allows an organization to proactively gain and then maintain intelligence of the state of the assets within the enterprise. Discovery of vulnerabilities, and the subsequent prioritization of remediation actions, enables a holistic security/risk view of the enterprise that cannot be readily achieved by the use of other systems and toolsets.

Having intelligence of what has been deployed before, what exists now, and early intelligence of future problems provides a foundation to build confidence in the security of the enterprise. Vulnerability Assessment provides a key enabler for managing the security risk and protecting the organization's reputation and revenues.

What do we Offer?

Fujitsu Thailand's Vulnerability Assessment As A Service provides a comprehensive answer, covering:

Vulnerability Assessment

Discovery – identify what is really on the network systems, applications, services, ports, certificates...

Remediate – track vulnerability management actions, create patching lists and manage exceptions.

Assessment – scanning the discovered devices, systems and applications for vulnerabilities.

Reporting – ability to create on demand customizable reports.

Prioritize – rate vulnerabilities using a comprehensive fully searchable knowledge base.

Recommendation – advise the weak points, corrective actions and how to improve.

Fujitsu Thailand's Security Operations Centre (SOC)

Fujitsu's state of the art SOC provides a focal point for:

- The co-ordination of security monitoring and security incident management.
- Providing situational awareness through the broad view of the security threat landscape due to the breadth of the Fujitsu Client base and the links with Cyber Security agencies and strategic technology partners.
- The ongoing support and tuning of the technology platforms to enable the service to retain current against the emerging security threat.
- Security event and incident related information to better enable risk mitigation.
- Expert security advice and reporting.
- Compliance assessment and support of associated reports and remedial actions.
- Fujitsu Thailand's Automation & Orchestration Services allow for full policy based control for clients with the ability to monitor, remediate and quarantine suspicious activity 24*7 seamlessly at machine speed

Why Fujitsu?

- Over a number of years Fujitsu has built an enviable reputation for delivering global security solutions to public and private sector customers, including many of the large Government departments.
- We have a portfolio of integrated managed security services covering the complete spectrum of Information Security and Data Privacy.
- We offer solutions developed in collaboration with our partners, who represent the most trusted names in Information Security
- Our security expertise covers the complete solution lifecycle, enabling us to help our customers assess their security requirements, design, build and operate security solutions and services.
- Our services are backed up with our renowned global ITIL aligned service delivery capability, enabling us to provide an end-to-end service that can be integrated into an organization's IT services, i.e. we don't just take a security solution view but a complete IT service view

Benefiting from Experience

Effective security that strikes the right balance between protection and productivity is driven by the implementation of an intelligent security policy. Fujitsu has a large number of skilled, qualified and experienced security practitioners and consultants, enabling us to offer a comprehensive portfolio of professional services, including:

- Penetration Testing Service
- Security Consulting Service
- Threat Hunting Service
- Firewall Policy Security Review
- Managed Endpoint Detection & Response (MDR), Extended Endpoint Detection & Response (XDR)
- Cybersecurity Training, Security Awareness Training and Phishing Simulation
- Firewall / Secure Web Gateway As A Service
