

Simplicity, out-of- the-box

» Fujitsu's Cluster-in-a-box is a resilient, reliable and flexible platform that will support our business and growth. It allows us to quickly provision new services while minimising downtime. It is a cost-effective, simple solution that meets our needs exactly. «

Mark Kirkwood,
IT Manager, Barrie Knitwear

Virtualisation is the most effective way of reducing IT expenses while boosting efficiency and agility. But for small and medium-sized businesses with few dedicated IT staff, it can often feel out of reach.

Fujitsu is changing that.

Fujitsu's Cluster-in-a-box solutions deliver a complete, pre-integrated environment that's engineered for simple and straightforward virtualisation – straight out of the box.

Just one hour to virtualisation ready – with no need for specialist IT skills.

We've built them with smaller businesses and branches in mind, removing the need for specialist IT skills and delivering a complete solution that enables you to go from the box to a virtualised IT environment in less than an hour.

With Fujitsu Cluster-in-a-box, you can move away from an expensive, piecemeal approach to hardware procurement. Instead, you can simplify IT with a single solution from a single vendor, managed and supported as a single product. And the entire system has been pre-built, pre-configured and pre-tested to maximise availability, minimise management requirements, and deliver business value from day one.

Cluster-in-a-box takes the complexity out of virtualisation, with a complete, compact system that can be deployed by anyone in under an hour.

shaping tomorrow with you

FUJITSU

Fujitsu Cluster-in-a-box solutions are comprised of 2 PRIMERGY servers linked to Fujitsu storage with an embedded switch – all in a single box running Windows Server 2012.

» I like to keep things simple and Fujitsu's Cluster-in-a-box enables me to do that. The virtual machines boot up in seconds, making it easy and fast to make changes on the fly. I've been so impressed with the elegance and effectiveness of this solution that I'll certainly bear Fujitsu in mind for future projects and further expansion. «

Mark Kirkwood,
IT Manager, Barrie Knitwear

Components at a glance

Choose from a variety of Cluster-in-a-box solutions based on **PRIMERGY CX 420-S**, **PRIMERGY CX 420-M**, and **PRIMERGY BX 400-M** servers, all engineered to help you:

- Cut power and cooling costs with highly efficient smart enclosures
- Scale storage capacity with ease as your data needs increase
- Reduce complexity with pre-integrated components
- Significantly reduce costs for cabling and networking
- Reduce space requirements by 50% with components that are optimised to work together
- Simplify integration with your existing investments with technology based on industry standards
