

Applications Agility enhances situational awareness

Dynamic development and management of your applications that delivers a true information advantage

The fast-paced nature and unique landscape of military operations increasingly rely on IT to deliver an information advantage. Your ability to make critical decisions depends on the quality of information at your disposal. But managing and developing the applications that deliver your situational awareness is a perpetual challenge. Your existing legacy applications need to keep pace with the dynamic environment, while new, leading-edge applications must be developed as you strive to keep ahead.

Fujitsu has developed a combination of modern application development techniques that delivers a much more flexible, agile applications environment than previously possible. This highly agile approach, developed specifically for the rigours of the Defence & National Security space, allows applications to be updated on a dynamic basis as dictated by the rapidly changing needs of an operation or mission. While at the same time, new applications can be developed and deployed.

Highly agile, flexible delivery and resourcing model

Our Development as a Service (DaaS) capability supports new, existing and potential projects in the delivery of secure application solutions, technologies and expertise. Our dedicated 20+ strong team of applications development specialists include Software Developers, Application Architects, Testers and Development Management skills.

This highly agile approach uses industry-leading Dev Ops tools and techniques to develop and deploy secure applications, rapidly. Whether it's existing legacy applications that require work to allow them to evolve to the dynamic environment in which they work. Or brand new applications that are taken from inception all the way through the design and development stage, right through to deployment and onward to supportability, our flexible delivery and resourcing model enables us to scale up or down in line with a customer's unique demands.

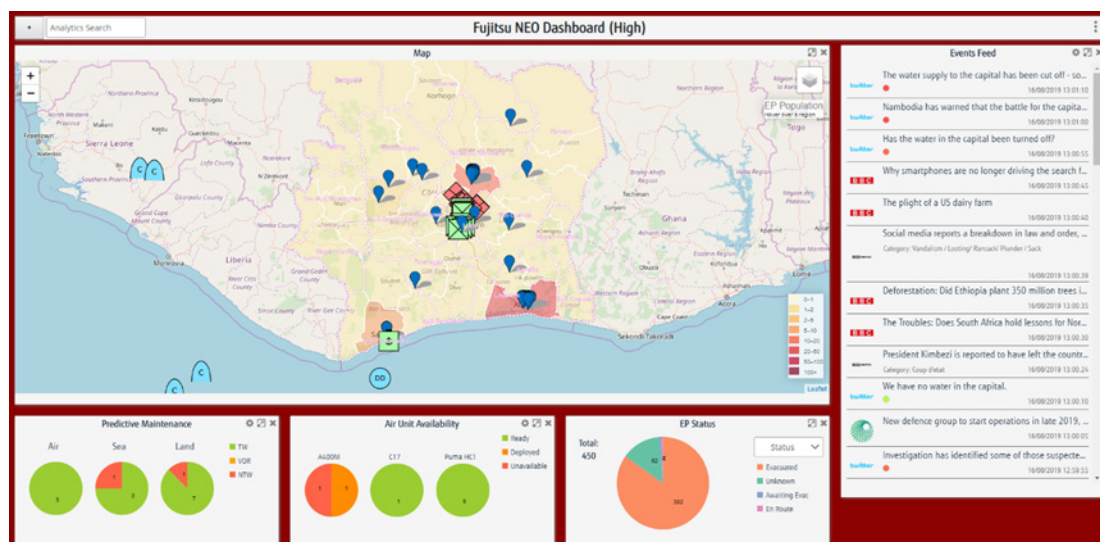

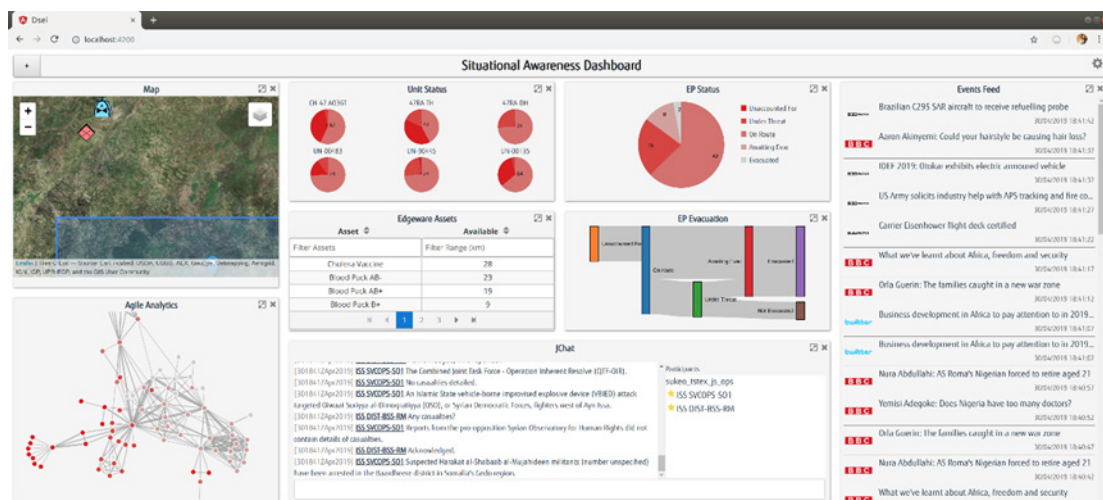

Enhanced situational awareness

Fujitsu is a true thought-leader in this space, continually adapting to define industry best practice and customer direction. Such applications agility techniques have a myriad of uses throughout the military environment. One such area that benefits greatly from this approach is the enhancements that can be realised to situational awareness.

A Commander's ability to view the entire situational awareness of the operation they are responsible for is critical to inform their decision-making. Having the capability to establish a holistic view of all aspects of the operation, including personnel, operational intelligence, logistics and supplies, medical support, financial information and communication systems contributes to successful planning and execution.

To deliver this enhanced situational awareness, Fujitsu has developed the capability to deliver a bespoke, configurable dashboard which graphically shows information from different sources in a single view. This uses analytics to help filter out and present only the most important information relevant to the user and the operation at hand.

So, Fujitsu is able to deliver its J1-J9 dashboards providing Commanders and specialists alike with accurate, real-time information relating to their military operations. This approach provides personnel with the agility to view the holistic operation, or to drill down to more detailed information relating to specific J-divisions. Connected to the dashboard is the ability to develop agile applications to support operations when time is in short supply.

Situational awareness benefits at-a-glance

- Information that may have previously been hidden becomes accessible and shared across a wide range of systems, brought together via a single pane of glass view
- Secure information sharing across organisations, communities, government departments and security domains facilitates a single source of truth
- By exposing only the most critical and relevant information based on the operation and role of the user greatly reduces data overload
- Fujitsu's Artificial Intelligence (AI) and data analytics capabilities provide accurate data analysis ensuring decisions are based on the best possible information available
- The innovative framework can be rapidly stood up and tailored for a specific operation.

Proven security and information assurance

Fujitsu's ability to deliver services and solutions at heightened security levels is well proven. Our approach builds on our extensive global experience of delivering highly secure solutions for numerous Government services that operate at SECRET or ABOVE SECRET classifications. In the UK, Fujitsu is certified for Cyber Essentials Plus and is also certified to ISO 27001, an independent international information security management standard.

Fujitsu will work closely with customers to ensure our information security standards meet the customer's own security and risk management requirements. In addition, Fujitsu shall adhere to all requirements stipulated by industry regulators, including the Defence Cyber Protection Partnership, and HMG Security Policy Framework and supporting Security Policies.

Fujitsu has developed a combination of modern application development techniques that delivers a much more flexible, agile applications environment than previously possible. This highly agile approach, developed specifically for the rigours of the Defence & National Security space, allows applications to be updated on a dynamic basis as dictated by the rapidly changing needs of an operation or mission. While at the same time, new applications can be developed and deployed.

Why Fujitsu?

For over 50 years we have innovated with the MOD, Government Departments and intelligence communities, co-creating new technologies and capabilities. As a result, Fujitsu has around 4,000 security cleared staff and the experience to deliver and manage both generic industry offerings and those tailored to specialist needs at OFFICIAL, SECRET and ABOVE SECRET classifications.

Enabling Your Information Advantage

In today's complex, digital operational environment, never before has information been such a key asset in securing operational advantage. Fujitsu's vision is to provide customers with the means to translate complex data into useful information upon

which to base critical decisions and actions. Transforming this ever-increasing pool of data into meaningful, useful information through analytics, automation and genuine Artificial Intelligence is critical to achieving this goal.

Fujitsu is fully committed to working closely with our customers, and through the use of co-creation will seek to enhance capability both through the acceleration of existing processes, and also through the delivery of truly new capabilities and ways of working. Our approach is based upon maximising both existing investment and best-in-class innovation, delivering the full spectrum of capabilities needed to enable your information advantage.
