Touch Panel Solutions Feather Touch Panel Long life version

Designed without compromises

The "Feather Touch-long life" technology has been design to offer reliable and robust resistive panels to the market, without compromising on the amazing light touch feeling of the previous feather touch series. It combines the advantages of resistive panel and Pcap panel.

Design advantages

The Feather Touch Panel counters the issues on EMI without any compromises on functionality.

Being resistive, it accepts all input methods from glove, finger to pen and is unaffected by liquid drops or spray. These features require no tuning.

The light touch operation and dual touch (zooming, rotating) functionality combined with its long life of up to 10 million finger inputs makes this touch panel comparable to capacitive panels.

The combination

The combination of features makes the Feather Touch Panel an ideal product for medical and industrial applications.

The panels are available in standard sizes from 5.7 to 22 inch. To benefit from the full advantages of the Feather Light Touch Panels, you can use the Fujitsu control board or IC's with USB/RS232 and I2C interfaces.

Features:

- Light touch feeling
- Dual touch recognition
- Low EMI sensitivity
- Low EMI emission
- 10 million inputs
- Standard sizes available from 5.7 to 22 inches
