

Are you looking to optimise your processes?

From inspiration to development: how to develop your automation journey

Interactive full day workshop to discover what Robotics Process Automation (RPA) can do for you

Robotic Process Automation is a powerful tool that can deliver wide-ranging benefits to your business – and your bottom line. That's why it's important to seize the moment. When it comes to implementing RPA at scale, you need to act with speed to see benefits in long-term.

We've recognised that this is the priority for high-volume automation programs. And now we've developed a structured workshop to take you on the automation journey.

Why automation?

Robotic Process Automation (RPA) is one of the most promising technologies for optimisation of processes and service delivery. There are significant benefits realised in RPA pilots and initial deployments that can be rapidly scaled out across the enterprise. Yet business and IT leaders are struggling to move the needle with only an additional 1% of enterprises scaling to over 50 robots in the past year.

Breaking through the automation glass ceiling:

To tackle this, we are offering a highly immersive full day event to give participants a chance to learn more about what RPA can do for your organisation in the context of your business imperative.

We invite you to take on this session, where we will be using our co-creation workshop space to empower the way you think about the future potential for RPA and to develop plans for digital transformation in your business.

Empowering the workforce and boosting productivity

We strongly believe in the benefits of automation to emulate human interaction to decrease costs, improve efficiency and reduce errors. We would like to use the hackathons as an opportunity to explore the advantages automation can bring to the wider business environment and to address the problem statement if appropriate.

What to expect?

We take you through our London Digital Transformation Centre to deliver a highly personalised, facilitated day using our unique human centric design thinking approach.

We will use this session to work with you to understand your business, processes, technology and your view on the productivity of your employees to identify the art of the possible in the field of automation for you.

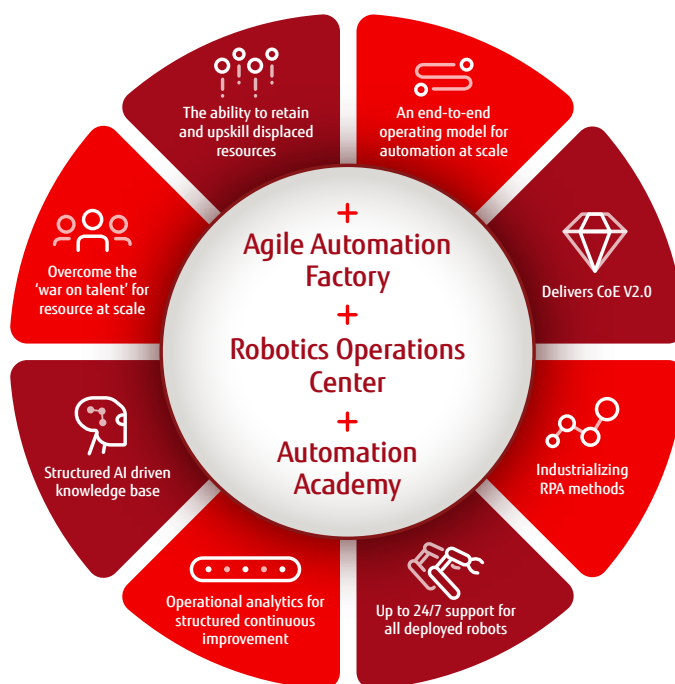

We have joined forces with our partner and leading RPA platform provider UiPath. We are collaborating to deliver new opportunities for our customers.

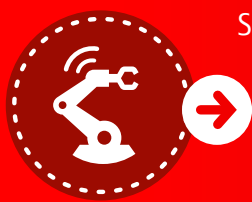

Through our strategic alliance, we will use this session to realise how automation can drive process automation for you

About our partners UiPath

Built for both business and IT, UiPath is the leading platform for enterprise Robotic Process Automation (RPA). More than 1,800 business customers and government agencies use UiPath's Enterprise RPA platform to rapidly deploy software robots. With a thriving RPA developer community of over 250,000 worldwide, UiPath is on a mission to democratise RPA and support a digital business revolution.
