Antisocial media: UK law toughens up on online abuse

Westminster intends to legislate to protect internet users from a range of harmful content. Is its online safety bill – nearly three years in the making – fit for enactment yet?

By Rosa Bases

The moment of the 2019 election, one of the million people in Britain who had been manually ushered to prominence of a common goal ranging across the leftward-tilted political divide in the UK. The Labour party, in particular, had taken a lead in the debate on online safety, with a vision of a future where the internet was once again a “marketplace of ideas”.

However, the current political climate is far from ideal. The government, under pressure from the tech giants, has been slow to act. The recent publication of the Online Safety Bill has been met with general scepticism, with many criticising its lack of ambition and its failure to adequately address the issue.

The government must acknowledge the higher level of online abuse that women and girls receive. This is not mentioned in the current version of the online safety bill.

How Fujitsu is delivering on the UK’s plan to become a scientific superpower

Science and innovation have taken their place at the heart of the UK’s vision to become a global power. How can we seize the potential of such leading-edge technologies like AI to solve some of our biggest challenges and prepare the UK for a post-Covid-19 future?

“Commercial feature”

There is a huge gap between our ability to produce ideas and our ability to turn those into products and services.

There is a gap between the number of people who have ideas and the number who can turn those ideas into products. The gap is significant and it is growing.

The challenge is not just about making sure that we have enough scientists and engineers working on the right problems. It is also about ensuring that we have the infrastructure and support systems in place to turn those ideas into products.

We need to work with the academic community and the private sector to ensure that the right people are working on the right problems. We need to ensure that the right infrastructure is in place to support the development of new technologies.

Similarly, we need to work with the private sector to ensure that they have the right support systems in place to turn ideas into products. We need to ensure that they have the right infrastructure and support systems in place to turn ideas into products.

In conclusion, there is a huge gap between our ability to produce ideas and our ability to turn those into products. We need to work with the academic community and the private sector to ensure that we have the right people working on the right problems. We need to ensure that we have the right infrastructure and support systems in place to turn ideas into products.
