IT professionals, are you ready to play a more strategic game?

What do board games and IT infrastructure have in common?
You don't win by setting them up. It's what you do once they're set up that counts. So, the quicker you can get them set up, the sooner you can start playing a more strategic game.

Box clever

Converged, hyperconverged or out-of-the-box solutions – they have many names and even more benefits. As a result, the business case is clear for most organisations. It's ROI rather than DIY. You get a virtualised IT infrastructure straight out of the box. It saves you space, power, money, and, most importantly, time.

The decision to choose an out-of-the-box solution is easy. Finding the right one, isn't always. Not all out-of-the-box solutions are created equal.

Discover a real game changer – meet the Fujitsu out-of-the-box family.
