- Implement technologies and processes designed to reduce catch weight loss
- Enable more accurate reporting and accounting of catch weight value throughout the supply chain, helping to increase revenue realization
- Reduce product time-to-market, enhancing your competitive advantage and revenue potential

PARTNER WITH FUJITSU TO GET RESULTS

Fujitsu has a track record of proven success with industry leaders who are well known producers of branded meat products.

Recently, one of our partners migrated from a patch-work legacy environment that did not effectively manage catch weight transactions. Addressing this issue was a key requirement since catch weight items are an important part of their business.

Working with Fujitsu, they successfully implemented SAP 6.0 with catch weight management and now operate an integrated ERP environment that effectively manages both standard and catch weight transactions.

As a result of our team effort, this partner has meaningfully improved customer interaction, business analysis, and control.
