KnowledgeLake Capture for iScanner

Capture

SharePoint

Touch Screen
Designed to give you more room for your fingers.

Keyboard
Full sized keyboard for quick and easy indexing.

Built in PC
Allows integration of KnowledgeLake Capture Software

Bridging the gap to a paperless office

KnowledgeLake's award winning Capture Software is now integrated with global leader Fujitsu's fi-6010N iScanner. This color duplex network scanner along with KnowledgeLake Capture Software enables users to scan directly to Microsoft SharePoint Server (MOSS) or Windows SharePoint Server (WSS) with corresponding meta-data for each document.
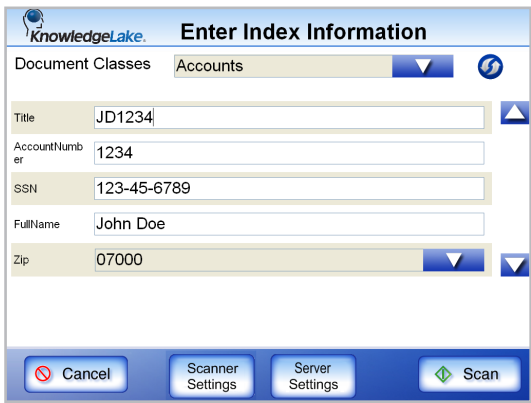

KnowledgeLake Capture enables the iScanner to be tightly integrated with SharePoint, providing users the ability to upload scanned documents to the appropriate SharePoint library with the corresponding meta-data for the columns of that library.

The KnowledgeLake Capture for iScanner experience can be further enhanced by utilizing the KnowledgeLake Imaging for SharePoint software. This will extend the indexing experience by allowing field validation, database lookups and drop-down pick lists.

The Central Administration built into the iScanner will enable your administrators to configure your iScanners from one location.

The Fujitsu fi-6010N iScanner is compact and the perfect tool for distributed scanning, creating a simple scanning kiosk. Users enjoy the easy walk up, scan and go experience.

KnowledgeLake Capture Software

With the KnowledgeLake Capture technology integration, the Fujitsu iScanner can unlock the value of existing technology investments and deploy a network scanning environment to Microsoft SharePoint

Scan to SharePoint

Use the iScanner to scan documents and index with the built-in keyboard and then save them directly to Microsoft Office SharePoint Server (MOSS) or Windows SharePoint Server (WSS)

KnowledgeLake Imaging for SharePoint

Enhance the indexing experience with database lookups and validation by using KnowledgeLake Imaging for SharePoint

Fujitsu fi-6010N iScanner

It's easy to use, has a simple device control and a highly secure network infrastructure that increases business productivity, simplifies document collaboration and improves bottom line savings

Auto Color Detection	Scan in color only when needed by using automatic color detection
Multiple Output Formats	TIFF, PDF, Searchable PDF and JPEG
Blank Page Deletion	Automatically deletes blank pages
Automatic Rotations	Automatically rotate pages scanned landscape or upside down
Ethernet Ready	Plug directly into your network with 10/100 base T connection
Multiple Resolutions	150, 200, 300 or 600 dpi
Fast Scanning Speeds	25 ppm simplex or 50 ppm duplex
Central Server Configuration	Configure all your iScanners using Central Administration on Windows 2000/2003/2008
