

Inofile ChartMD Information Overview

EMR or no EMR?

Inofile ChartMD helps you work more efficiently with or without an EMR. This reduces the time spent capturing documents, so you have more time for patient care.

Inofile ChartMD is a standards-based interoperable healthcare software solution for capturing patient charts, loose filing and importing faxes into a patient directory structure or directly to the EMR. Inofile ChartMD works exclusively with the Fujitsu network scanners 6010N and N1800.

Practice managers need simple, easy and cost effective; they want more time for patient care. Combine the Fujitsu Network scanner and Inofile ChartMD to capture the necessary documents for a complete patient record.

Inofile ChartMD's clinical workflow process allows a practice to scan an entire chart room of files or capture loose documents on demand. Batches of scanned images are indexed quickly using the built in keyboard and touch screen of the Fujitsu Network scanner.

The simple, intuitive screens guide the user through the clinical workflow process.

Inofile ChartMD will:

- Work with or without an EMR
- Export to a patient file on the network
- Significantly reduce the cost of managing paper charts

The Fujitsu Network Scanner includes the useful functionality of scan to email, fax and print. Leverage the proved efficiency of Fujitsu and Inofile ChartMD's batch scanning to become EMR ready!

Why Inofile ChartMD?

Improves Efficiency

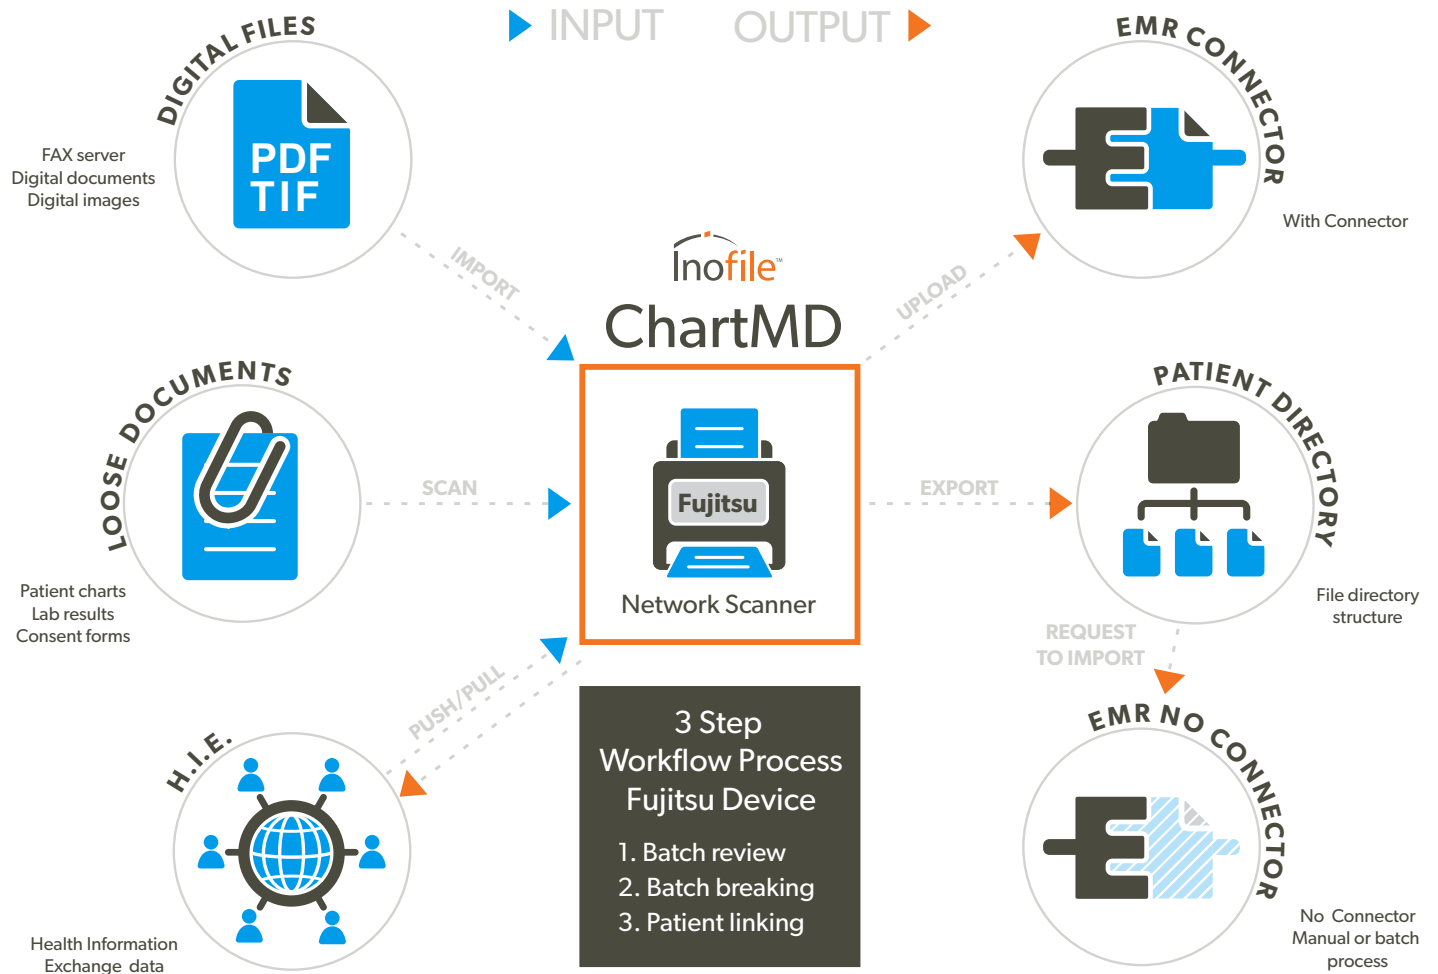

- Easy training
- Batch scanning
- Fax Import
- Automated file naming

Imports to the EMR

- Interoperable HL7/CDA healthcare format
- Structured file naming
- Uses the batch import feature of certified EMR's
- This accelerates the transition to an EMR

Efficient Workflow Process

Inofile ChartMD's batch scanning workflow allows the user to quickly scan an entire chart or a day's loose filing.

Improve business process and workflow accuracy. Improve customer service and patient care. Improve your practice with Inofile ChartMD.
