Datasheet

Fujitsu Market Place Cloud

Digital Retail Commerce

Market Place Cloud is a composable digital commerce solution designed for retailers demanding a consistent customer experience, deployable in the Cloud or as a hybrid with in-store resilience.

What is Market Place Cloud?
Market Place Cloud is the orchestrator of the digital retail enterprise. It is a composable, MACH application, deployable in different ways, such as a till checkout (including an image-driven interface for café and concession), self-checkout, associate mobile and Scan & Pay to support retailing your way - managing many of the complex and demanding retail processes necessary today.

It sits at the very heart of the retail enterprise and serves both the customer experience via the different customer touchpoints, as well as the data essential for trading managed from and to the retailer’s enterprise systems.

What can it do?
Market Place Cloud supports key omni-channel use cases, including Click and Collect, Buy Online, Return in Store, Order online, pickup and pay in-store and others. It also supports Enterprise Pricing, Store Operations, Back Office operations, Enterprise Operations and Data Maintenance.

What deployment options are there?
Market Place can be deployed in multiple ways, including fully in the Cloud. This enables retailers to easily, quickly and more cost effectively take advantage of the power of Market Place.

Market Place flexibility
For retailers concerned about the in-store aesthetics, cloud deployment means no bulky till equipment and store servers, thus reducing hardware costs. And because we don’t have all of the data and services to support on the device, this gives you the flexibility to sell how you want to, whilst still delivering the full store commerce functionality you need.

Market Place Cloud opens up the ability for retailer business teams to deploy mobile devices - better suited to creating a richer customer experience. For example, running on a cost-effective tablet or a lightweight till, the device connects to Market Place data and services hosted in the Cloud.

This approach also provides you with options to allow you to offer mobile ‘on-floor’ selling or self-service options to your shoppers. Self-Service is available either via self-checkout or via shopper Scan & Pay from their own devices.

The good news is that Market Place is cloud-agnostic, so although we recommend Azure, we can run on any public cloud, keeping things simple there too. And, for those retailer IT teams who worry about being able to trade regardless of network connectivity, it is easier than ever to build network resilience to provide in-store back-up.

Optional extras: providing support centrally
It’s also easy to take advantage of Fujitsu’s Market Place Retail Commerce solution to provide support centrally for end-to-end order management, inventory management, pickup and delivery management, customers, pricing, promos and coupons e-commerce, employee management, enterprise reporting and cloud payments.

Market Place Cloud efficiency
Market Place Cloud has been designed to support dynamic scalability, this means you can pay for the resources you need, as you need them. We help you find your average run rate and then Market Place Cloud can flex to add resources during peaks and then auto-scale down again when business returns to normal levels.

Quick and easy
As you grow, it becomes easier than ever to expand to new locations or pop-ups. Having
### Features and Benefits

<table>
<thead>
<tr>
<th>Main features</th>
<th>Benefits</th>
</tr>
</thead>
<tbody>
<tr>
<td>■ Comprehensive composable Retail Commerce functionality designed for today’s flexible omni-retailing and pay</td>
<td>■ Options to allow you to design the ultimate customer experience from in-store, across channels, through self-service to pop-ups</td>
</tr>
<tr>
<td>■ MACH (micro-services, API first, cloud-hosted and optionally headless)</td>
<td>■ Composable to allow you to create the solution you need and to transition more easily to meet business needs</td>
</tr>
<tr>
<td>■ Supporting touchpoints including mobile, café/concessions, traditional checkout or via self-service: self-checkout or Scan &amp; Pay</td>
<td>■ Streamlining your store with lower cost, retail-centric cost-effective hardware with full store peripheral device handling</td>
</tr>
<tr>
<td>■ Easy deployment via Azure Springboard template</td>
<td>■ Fast deployment, with configurable options to suit your business model</td>
</tr>
<tr>
<td>■ Open-API framework to support easy integration to third party apps to add further flexibility and service value to your business</td>
<td>■ Dynamic Cloud scalability to easily manage your peak trading cost effectively</td>
</tr>
<tr>
<td>■ Full end to end cloud and application monitoring, management and support</td>
<td>■ Optional extensions for managed services and/or our enterprise solution to extend to order management, CRM, back office and reporting</td>
</tr>
<tr>
<td>■ Cloud payments for fully integrated fast and secure retailing</td>
